

Mobil Synergy 2000 is a cleaner burning unleaded petrol for drivers who seek affordable quality. Blended with similar chlorine-free detergents as used in Mobil Synergy 8000, Mobil Synergy 2000 will effectively maintain the cleanliness of your entire fuel intake system, while also providing excellent corrosion protection.

New engines will be kept clean by continuous use of Mobil Synergy 2000, helping your vehicle continue to perform as the manufacturer intended. As a result, you'll enjoy a cleaner running vehicle, less harmful emissions and a more enjoyable drive.

In 2002 the Federal Government will abolish the use of lead in gasoline. In recognition of community expectations, Mobil has proactively introduced a lead replacement petrol as part of its new generation fuel system. Mobil has ensured that the removal of lead does not mean the driving experience is altered or diminished, or that engine modifications are required for pre-1986 vehicles.

Mobil Synergy Lrp is a high octane (96 RON) fuel that provides a seamless transition from leaded to lead-free petrol. This is achieved by additive technology that protects soft exhaust valve seats through 'solid lubrication', giving you many years of motoring enjoyment, while also being kinder to the environment. And best of all, as with all fuels in the Mobil Synergy Fuel System, comes the satisfaction of knowing you've made the right choice.

	Benefits	Description	Usage	Octane
	<p>More power. Greater economy. Quicker response. Cleaner emissions. Added corrosion protection. Smoother running.</p>	<p>Removes engine deposits and with continued use, keeps the fuel delivery system and combustion chambers clear of harmful organic deposits. Maintains your engines fuel system and keeps it running at peak performance.</p>	<p>All unleaded petrol powered vehicle types including turbocharged, high performance and small cars. Suitable for all cars currently using leaded fuel; however, some pre-1986 vehicles will require anti-valve seat recession additives. This additive is available at Mobil Service Stations (see in-store guide for information on which vehicles require the additive). Also suitable for motorcycles, boats, and personal watercraft.</p>	98 RON
	<p>Keep engines running cleaner. Added corrosion protection. Smoother running.</p>	<p>Controls the cleanliness of fuel injection systems, intake valves and the combustion chamber. It also provides excellent corrosion protection.</p>	<p>All unleaded petrol powered vehicle types, except where higher octane petrol is specified by the car manufacturer (for example, Mobil Synergy 8000).</p>	91/92 RON
	<p>Lead free. Cleaner emissions.</p>	<p>A fuel developed for vehicles previously running on leaded fuel. Lead free emissions with the performance of a leaded fuel. Developed ahead of new legislation to abolish lead in petrol in 2002.</p>	<p>All petrol powered vehicles previously using leaded fuel.</p>	96 RON
	<p>Premium quality fuel suitable for use in all diesel-powered engines currently on the road in Australia. The Cloud Point is seasonally adjusted to ensure high performance all year round. Mobil Synergy Diesel is the focus of ongoing development to meet emerging diesel engine technology and changing driver/operator expectations.</p>			
	<p>Auto LPG gives significant environmental benefits including reduced air toxins, reduced greenhouse gas emissions and less ozone forming potential. Auto LPG is an economical fuel, which gives you more drive for your dollar.</p>			

# A new generation in fuel technology

Rediscover the joy of driving with a new generation fuel system from Mobil.

From the moment you turn the key, you'll feel the difference.

The difference that comes from knowing you've made the right choice.

So whether it's a quick trip to the shop or an exhilarating drive down the coast, Mobil has a fuel to meet the needs of every car, every driver, every time.

**Welcome to the Mobil Synergy Fuel System - Cleaner Burning, Performance Enhancing, Smile Generating.**

 8000	High Octane Premium Unleaded Fuel
 2000	Unleaded Fuel
 Lrp	Lead Replacement Fuel
	
 Gas	Auto LPG Fuel

From the world leader in fuels technology comes a new generation of fuels, incorporating fully synthetic additives that enhance the performance of your vehicle. The Mobil Synergy Fuel System provides engine economy and efficiency, burns cleaner making it environmentally responsible, and delivers unsurpassed quality for your peace of mind. It's the family of fuels that's not only better for vehicles, it's also better for the environment and most importantly, better for you.

## A New Generation of Power

Mobil Synergy 8000 is a high octane, high performance fuel for all cars and all car lovers\*. A fuel ahead of its time, designed for all drivers. It reassures you as only the very best can, because a quality fuel such as this maximises the efficient operation of all motor vehicles. It keeps engines running cleaner and smoother thereby maximising power and efficiency — while also being kinder to the environment. And the feeling you get from that is something you just can't measure. Mobil Synergy 8000 has the added advantage of a fully synthetic additive package that provides detergency, lubricity and corrosion protection.

### Here's how it works.

<b>Before</b>	<p>The internal combustion process can leave behind by-products in your engine each time you drive. This build-up of deposits can cause idling to be erratic, impede acceleration and performance and in many instances, increase your fuel consumption and exhaust emissions.</p> <p>Over time, these deposits build up in intake systems, on fuel injectors and in combustion chambers causing your car to work harder for the same results.</p> <p>However, with the fully synthetic chlorine-free detergent additives in Mobil Synergy 8000, you can clean away all those harmful by-products and keep your engine clean.</p>	<b>After</b>
		
		
		

These detergents also effectively clean fuel injection systems/carburetors and intake valves, and provide excellent corrosion protection. This efficient deposit control technology maximises the performance of engine control systems and helps minimise exhaust emissions. It all adds up to lower emissions, more power and smoother drivability. The special lubricating qualities of this superior fuel protect moving parts, which reduces wear and extends the life of your fuel delivery system.

Mobil Synergy 8000 is especially beneficial when it comes to turbocharged and high performance vehicles, allowing these cars to reach full performance potential. However, owners of older vehicles will also reap the rewards, as will drivers of smaller cars who will value the efficiency benefits of Mobil Synergy 8000.

\*Some pre-1986 vehicles may require an additive (see in-store guide)
